

Studio Kits Installation Guide

Equipment Needed:

- SilentFiber Acoustic Wall panels
- Double-sided adhesive tape (included)
- Ruler/Leveler
- Measuring tape
- Marking pencil

Applying Double-Sided Adhesive

- First, clean the wall or surface where the SilentFiber Acoustic panel is going to be placed to prevent disruption from dust and dirt.
- Second, place the SilentFiber Acoustic Panel on the wall, and using a level tool and marking pencil, score a mark where the board is level and at the appropriate height.
- Third, peel the white layer off of the double-sided tape to expose the adhesive.
- Lastly, place the acoustic panel where the marks were scored on the wall or surface (keeping it level) and press **HARD** around the edges for up to 60 seconds for it to hold in place.

* Double-Sided hanging adhesive included with kit *

Place columns 1'-3' apart for most effective treatment

NOTE: areas with high moisture (humidity) or heat may affect adhesive backing. For additional reinforcement, added glue or spray adhesives may be necessary for hanging in these types of room conditions.
